(249) 288-3586 | github.com/Juanfec4 | Toronto, ON

Aspiring Software Engineer with expertise in developing flexible client-facing applications and REST APIs using TypeScript, Node.js, and React. Proven track record of enhancing system performance, data integrity, and security across diverse projects following Agile Methodologies.

Relevant Experience

Application Developer | ESAR   Jul. 2020 - Oct. 2021

- Upgraded ERP systems for hospitals by building single-page and full-stack applications on top of React, providing doctors with better access to medical records.
- Improved service accessibility through the migration of web-hosted learning platforms into application contexts utilizing Redux and Electron.
- Integrated various web services and data clouds with an in-house REST API built using Express and Knex.js.

Projects

GitStory | git-story-rho.vercel.app/?user=juanfec4

- Single Page Application built on TypeScript using React, and TailwindCSS, that lets users quickly share and view their GitHub repositories. The application integrates with the GitHub API.

VidStats API & Client | vid-stats.vercel.app

- Full Stack Application built using Node.js, React (ES6+), and Express that lets users interact with Open AI's Whisper audio model, creating real-time word transcriptions and analyses for videos.

Education

B.S. Software Engineering | Western Governors University   *(Anticipated)* Feb. 2024

Professional Diploma, Web Development | Brainstation   Dec. 2023

Licences & Certifications

ITIL4 | Axelos

Certified Cloud Practitioner | AWS

Professional Skills

- Full Stack Development
- REST API Design
- JavaScript/TypeScript Expertise
- React & Node.js Proficiency
- Microservices Architecture
- MySQL, Redis & MongoDB
